Introduction to Tissue Engineering: Applications and Challenges (IEEE Press Series on Biomedical Engineering)

Ravi Birla

Introduction to Tissue Engineering: Applications and Challenges (IEEE Press Series on Biomedical Engineering) Ravi Birla

A comprehensive reference and teaching aid on tissue engineering—covering everything from the basics of regenerative medicine to more advanced and forward thinking topics such as the artificial liver, bladder, and trachea

Regenerative medicine/tissue engineering is the process of replacing or regenerating human cells, tissues, or organs to restore or establish normal function. It is an incredibly progressive field of medicine that may, in the near future, help with the shortage of life-saving organs available through donation for transplantation.

Introduction to Tissue Engineering: Applications and Challenges makes tissue engineering more accessible to undergraduate and graduate students alike. It provides a systematic and logical eight-step process for tissue fabrication. Specific chapters have been dedicated to provide in-depth principles for many of the supporting and enabling technologies during the tissue fabrication process and include biomaterial development and synthesis, bioreactor design, and tissue vascularization. The tissue fabrication process is further illustrated with specific examples for liver, bladder, and trachea. Section-coverage includes an overall introduction of tissue engineering; enabling and supporting technologies; clinical applications; and case studies and future challenges.

Introduction to Tissue Engineering:

- **Presents medical applications of stem cells in tissue engineering**
- **Deals with the effects of chemical stimulation (growth factors and hormones)**
- **Covers current disease pathologies and treatment options (pacemakers, prosthesis)**
- **Explains bioengineering, design and fabrication, and critical challenges during tissue fabrication**
- **Offers PowerPoint slides for instructors**
- **Features case studies and a section on future directions and challenges**

As pioneering individuals look ahead to the possibility of generating entire organ systems, students may turn to this text for a comprehensive understanding and preparation for the future of regenerative medicine.

From reader reviews:

Inge Reader:

Book is definitely written, printed, or outlined for everything. You can understand everything you want by a publication. Book has a different type. As we know that book is important matter to bring us around the world. Next to that you can your reading proficiency was fluently. A book Introduction to Tissue Engineering: Applications and Challenges (IEEE Press Series on Biomedical Engineering) will make you to be smarter. You can feel much more confidence if you can know about every thing. But some of you think that will open or reading any book make you bored. It is not make you fun. Why they can be thought like that? Have you looking for best book or acceptable book with you?

Fabiola Stewart:

Book is to be different for each grade. Book for children till adult are different content. We all know that that book is very important for all of us. The book Introduction to Tissue Engineering: Applications and Challenges (IEEE Press Series on Biomedical Engineering) had been making you to know about other know-how and of course you can take more information. It is quite advantages for you. The e-book Introduction to Tissue Engineering: Applications and Challenges (IEEE Press Series on Biomedical Engineering) is not only giving you much more new information but also being your friend when you sense bored. You can spend your own personal spend time to read your e-book. Try to make relationship with the book Introduction to Tissue Engineering: Applications and Challenges (IEEE Press Series on Biomedical Engineering). You never truly feel lose out for everything in case you read some books.

Sara Burns:

Reading a publication can be one of a lot of task that everyone in the world likes. Do you like reading book consequently. There are a lot of reasons why people enjoyed. First reading a reserve will give you a lot of new details. When you read a book you will get new information due to the fact book is one of many ways to share the information or even their idea. Second, studying a book will make a person more imaginative. When you looking at a book especially tale fantasy book the author will bring one to imagine the story how the personas do it anything. Third, it is possible to share your knowledge to other individuals. When you read this Introduction to Tissue Engineering: Applications and Challenges (IEEE Press Series on Biomedical Engineering), it is possible to tells your family, friends and also soon about yours book. Your knowledge can inspire others, make them reading a reserve.

Ralph Overman:

In this age globalization it is important to someone to obtain information. The information will make you to definitely understand the condition of the world. The condition of the world makes the information quicker to share. You can find a lot of personal references to get information example: internet, magazine, book, and soon. You will see that now, a lot of publisher that print many kinds of book. The particular book that

recommended to you is Introduction to Tissue Engineering: Applications and Challenges (IEEE Press Series on Biomedical Engineering) this guide consist a lot of the information of the condition of this world now. This specific book was represented how can the world has grown up. The dialect styles that writer require to explain it is easy to understand. Often the writer made some investigation when he makes this book. That's why this book suited all of you.
