Landscape Architecture Theory: An Ecological Approach

Michael Murphy

Landscape Architecture Theory: An Ecological Approach Michael Murphy

For decades, landscape architecture was driven solely by artistic sensibilities. But in these times of global change, the opportunity to reshape the world comes with a responsibility to consider how it can be resilient, fostering health and vitality for humans and nature. *Landscape Architecture Theory* re-examines the fundamentals of the field, offering a new approach to landscape design.

Drawing on his extensive career in teaching and practice, Michael Murphy begins with an examination of influences on landscape architecture: social context, contemporary values, and the practicalities of working as a professional landscape architect. He then delves into systems and procedural theory, while making connections to ecosystem factors, human factors, utility, aesthetics, and the design process. He concludes by showing how a strong theoretical understanding can be applied to practical, every-day decision making and design work to create more holistic, sustainable, and creative landscapes.

Students will take away a foundational understanding of the underpinnings of landscape architecture theory, as well as how it can be applied to real-world designs; working professionals will find stimulating insights to infuse their projects with a greater sense of purpose.
