Mathematical and Statistical Estimation Approaches in Epidemiology

Mathematical and Statistical Estimation Approaches in Epidemiology

Mathematical and Statistical Estimation Approaches in Epidemiology compiles theoretical and practical contributions of experts in the analysis of infectious disease epidemics in a single volume. Recent collections have focused in the analyses and simulation of deterministic and stochastic models whose aim is to identify and rank epidemiological and social mechanisms responsible for disease transmission. The contributions in this volume focus on the connections between models and disease data with emphasis on the application of mathematical and statistical approaches that quantify model and data uncertainty. The book is aimed at public health experts, applied mathematicians and scientists in the life and social sciences, particularly graduate or advanced undergraduate students, who are interested not only in building and connecting models to data but also in applying and developing methods that quantify uncertainty in the context of infectious diseases. Chowell and Brauer open this volume with an overview of the classical disease transmission models of Kermack-McKendrick including extensions that account for increased levels of epidemiological heterogeneity. Their theoretical tour is followed by the introduction of a simple methodology for the estimation of, the basic reproduction number, R_0 . The use of this methodology is illustrated, using regional data for 1918–1919 and 1968 in uenza pandemics.

From reader reviews:

Billy Reynolds:

Have you spare time for any day? What do you do when you have more or little spare time? Yeah, you can choose the suitable activity with regard to spend your time. Any person spent their very own spare time to take a stroll, shopping, or went to the Mall. How about open or maybe read a book called Mathematical and Statistical Estimation Approaches in Epidemiology? Maybe it is for being best activity for you. You recognize beside you can spend your time using your favorite's book, you can smarter than before. Do you agree with it has the opinion or you have some other opinion?

Carrie Wakefield:

This Mathematical and Statistical Estimation Approaches in Epidemiology are usually reliable for you who want to certainly be a successful person, why. The reason of this Mathematical and Statistical Estimation Approaches in Epidemiology can be on the list of great books you must have will be giving you more than just simple reading food but feed anyone with information that might be will shock your previous knowledge. This book is definitely handy, you can bring it almost everywhere and whenever your conditions throughout the e-book and printed ones. Beside that this Mathematical and Statistical Estimation Approaches in Epidemiology giving you an enormous of experience such as rich vocabulary, giving you demo of critical thinking that could it useful in your day action. So , let's have it and luxuriate in reading.

Paul Williams:

Reading a e-book tends to be new life style in this era globalization. With reading through you can get a lot of information that may give you benefit in your life. With book everyone in this world can easily share their idea. Ebooks can also inspire a lot of people. Lots of author can inspire their own reader with their story or perhaps their experience. Not only the storyplot that share in the guides. But also they write about the ability about something that you need instance. How to get the good score toefl, or how to teach your kids, there are many kinds of book which exist now. The authors on earth always try to improve their talent in writing, they also doing some exploration before they write on their book. One of them is this Mathematical and Statistical Estimation Approaches in Epidemiology.

Mildred Kershner:

Are you kind of stressful person, only have 10 as well as 15 minute in your day to upgrading your mind skill or thinking skill possibly analytical thinking? Then you have problem with the book as compared to can satisfy your short space of time to read it because all this time you only find reserve that need more time to be examine. Mathematical and Statistical Estimation Approaches in Epidemiology can be your answer because it can be read by an individual who have those short free time problems.
